

## ANGLE PROFILES

### ARCHITECTURAL ALUMINUM ANGLES - .125" WALL THICKNESS, EQUAL LEG

Aluminum angle sizes and shapes vary to fit various applications and requirements. Architectural angles are commonly found in architectural molding and trim, window and door construction, and furniture. Structural angles are often used in heavy-duty structures such as scaffolding, railroad cars, truck and marine components, floor framing, roof trusses, pipelines, and wire products. They're easy to install, clean, and maintain and are available in a number of finishes.

- Stocked in Lengths: Varies by individual profile
- Stocked in Finishes: Varies by individual profile
- Composition: Varies by individual profile

PM5060

Black  
PM5080

### FIELD PAINTING INSTRUCTIONS

Clean and prep mill finish (MF) trim in accordance with the paint manufacturer's best practices. Ensure paint and primer is recommended for aluminum via paint manufacturer. Apply coating until desired finish is achieved.

**Painting Clear Anodized:** This is generally not recommended, but can be achieved when necessary. Clean and treat aluminum with an acid etch solution. Rinse thoroughly and dry. Apply an acid-etched prime/primer based on the paint manufacturer's best practices. Apply paint coating per paint manufacturer's specifications.

### CUTTING INSTRUCTIONS

When necessary, cut material using a miter saw with a high-quality, non-ferrous carbide blade with a minimum tooth count of 80, and lubricant. Clean trim prior to installation. Refer to saw blade manufacturer's best practices for additional information.

### WARRANTY

Eagle Aluminum's warranty covers manufacturing defects for a period of three years. Refer to Eagle Aluminum's warranty documentation for additional details.
